Professional Summary

Fullstack Developer with 3+ years of experience building SaaS products from scratch and evolving production systems. Specialized in React, Next.js and NestJS, with hands-on experience in multi-tenant architectures, REST APIs, and agentic AI workflows — including multi-agent orchestration with Claude Code and MCP for automated development pipelines. I have contributed to platforms used in real-world environments in the healthcare and retail sectors, and designed end-to-end solutions integrating frontend, backend, and databases. Winner of 3 awards at ETHGlobal Buenos Aires 2025.

Work Experience

Fullstack Developer · Inuba — Dec 2024 – May 2026

Healthcare SaaS platform used by pharmacies for clinical patient management.

- Contributed to the development and evolution of a production system used by healthcare professionals.
 - Developed and maintained key modules including patients, treatments, questionnaires, and dashboards.
 - Built complex user interfaces focused on clinical workflows and usability.
 - Implemented dynamic forms with validations tailored to medical logic.
 - Leveraged AI-assisted development (agents) to automate testing workflows and improve development efficiency.
-

Fullstack Developer · Agencia Gato — Jun 2024 – Jan 2025

- Developed web applications focused on performance and user experience.
 - Led the development of an accounting dashboard optimized using server-side rendering.
 - Translated business requirements into functional user interfaces from prototypes.
 - Contributed to backend API development and business logic.
-

Projects

Zelterm — SaaS ERP for Retail (Personal Project)

Demo: <https://zelterm.com/>

- Designed and developed a multi-tenant ERP system for inventory, sales, and business operations.
 - Built the full system architecture (frontend, backend, and database).
 - Implemented complex modules such as inventory tracking, POS system, and electronic invoicing.
 - Deployed the system using cloud-based architecture to ensure scalability and availability.
 - Built a multi-agent development system using Claude Code and MCP: slash commands route tasks to specialized frontend or backend agents, each with domain-specific skills, automated test generation, and dedicated code review agents per layer — significantly accelerating implementation cycles.
-

Scheduling System for Private Tutors (MVP)

Demo: <https://schedule-app-snowy.vercel.app/login>

- Built a system to manage classes, students, and payments for independent teachers.
 - Developed in 3 days as a functional MVP based on a real-world problem.
 - Currently being validated with a real user.
-

Web3 Betting Application — Personal Project

Demo: <https://catalystbet.vercel.app/>

- Developed a decentralized application interacting with smart contracts on testnet.
- Implemented a full betting system with phases (betting, race, claim).
- Integrated wallet connection and blockchain transaction execution.
- Built a complete UI with history, leaderboard, and multiple views.

Hackathons & Awards

ETHGlobal Buenos Aires — Hackathon · Nov 2025

<https://ethglobal.com/showcase/hack-the-world-3tw5n>

- Submitted project "*Hack the World*" competing among international Web3 developers.
- Won 3 prizes in the MATE Metaprotocol (EVVM) track: Best Integration, Use the Metaprotocol, and Feedback prize.

Technical Skills

Frontend: React, Next.js, TypeScript

Backend: Node.js, NestJS, Express

Databases: PostgreSQL, Prisma, Supabase

Architecture: Monorepos, REST API design, multi-tenant systems

Tools: Git, Docker (basic), Testing (Playwright), Cloud: Vercel, Railway, Neon, Cloudflare R2

Education

Self-taught Software Developer

Hands-on learning through real-world projects, technical documentation, and continuous improvement.
